

Diamond Coatings Anti-Reflective Film

Diamond Coatings Anti-Reflection Film will dramatically reduce reflection, provide excellent scratch resistance when applied to Acrylic or Polycarbonate sheet giving a surface hardness approaching that of glass together with superior resistance to chemical attack.

Diamond Coatings Anti-Reflection Film is suitable for internal and external use but it is recommended that a UV stable substrate be used when exposed in direct sunlight.

STRUCTURE

TECHNICAL DATA

Reflectance (D65 Light Source illuminating at 12°)	500nm	0.90%
	550nm	0.92%
	600nm	1.04%
	Y	0.96%
Transmittance (D65 Light Source illuminating at 0°)		95.40%
Haze		0.1%
Pencil Hardness		6 – 8 H
Peel Strength (Glass AF)		12.2N/20mm
